	RIKA glass floor plate	Z32410

The RIKA glass floor plate has an imprint.

The glass floor plate should be laid with the imprint on the underside.

To avoid penetration of dirt under the glass floor plate, please apply the enclosed selfadhesive lip seal on the underside along the imprint and on the inner side of the stove's support base of the RIKA glass floor plate.

Please note, that a 2-3mm long gap needs to be kept between the rear part of the support base and the glass floor plate in order to avoid a vacuum effect on the inside.
