1. INTRODUCTION

Our congratulations for having purchased a quality product.

To ensure a trouble-free functioning of your appliance we recommend you to thoroughly read through the present instructions and to strictly observe the suggestions contained herein at all times.

By cleaning and servicing your appliance regularly and expertly you will ensure a long-lasting functioning over many years.

RIKA is always ambitious to provide an excellent service. Have a good time, enjoying the cozy warmth of your RIKA stove as often as you wish.

RIKA Innovative Ofentechnik GmbH

2. COMMISSIONING

General view of interfaces

External request

- External room thermostat*
- Contactor (e.g. exhaust hood)*)

* remove cable bridge and connect a 2-pin cable with a section between 0.5 and 0.75mm² instead.

It will take approximately 5 minutes for your stove to shut down after receiving an external shut-down request.

External request incl. cable bridge

USB connection

Serial interface

External request

Select a language. Subsequently, adjust Date and Time.

Tip
To prevent incorrect input, only the permissible digits are released for each input step.

Date

The “C” button deletes the input within a selected display box.

In case of erroneous entry, depress the appropriate box to make a new entry.

If all data have been entered correctly, an Enter button appears. By pressing this button, the input is confirmed and the data are saved.

USB connection

- Flash drive (included in the delivery)
- RIKA firenet (available on request)

Tip
Both language selection and setting of date and time must only be carried out on initial operation.

Please note
Manipulations on hardware components may only be performed by a trained expert dealer or our customer service. Inappropriate handling of these parts will void contractual and legal warranty claims!

Please note
The appliance may only be put into operation if fully assembled!

Before your appliance is energised for the first time, the flash drive (included in the delivery) must be inserted into the interface provided for that purpose at the rear side of the stove.

Install the software as described in the attached instructions.

After the unit is connected to the mains, the display changes to Language Selection.
3. MENU NAVIGATION

Your stove is equipped with a state-of-the-art control system. You can control all functions on the intuitive touch display. The surface of the touch display responds to both finger pressure and touch pen.

Please note
Do not use sharp-pointed objects to operate the appliance so as to prevent damaging the surface of the touch display.

Navigation

The complete controls of your appliance include 4 main menu levels:

<table>
<thead>
<tr>
<th>HOME</th>
<th>OPERATING MODES</th>
<th>SETTINGS</th>
<th>INFO</th>
</tr>
</thead>
<tbody>
<tr>
<td>HOME</td>
<td>OPERATING MODES</td>
<td>SETTINGS</td>
<td>INFO</td>
</tr>
<tr>
<td>Controls: Unit start (stop, regulation of heating power / set ambient temperature, display of current stove state, active info</td>
<td>Range: Manual mode, automatic mode and comfort mode</td>
<td>Setting: Heating times, Multi-air, frost protection, RIKA room sensor, ...</td>
<td>Display: flame temperature, total operating hours, total ignitions, software version, ...</td>
</tr>
</tbody>
</table>

Standard functions

Each stove model provides the following standard functions:

| Reducing heating output | Increasing heating output |
| Off | Start / Standby |

Please note
To avoid involuntary starting or switching off, either button must be depressed for 2 seconds.

Please note
If your stove is shut off during the operating states IGNITION or INITIAL PHASE, the display will switch to BURN-OFF only after a few minutes.

Cleaning function

In addition to the standard functions, stove models with an automatic grid dispose of a cleaning function.

| Grid turning into cleaning position | Show additional functions |
| Grid turning into cleaning position | Show additional functions |

Please note
Turning of the grid is only possible during the operating state STOVE OFF at a firebox temperature below 80°C!
Door opener
In addition to the standard functions, some stove models dispose of a door opening function.

ECO function
In addition to the standard functions, some combi stoves dispose of an ECO function.

Active info
The 'Active info' displays whether or not a module is connected or enabled.

Please note
More detailed information on the different options can be found in the respective instructions.
4. OPERATING MODES

In the main menu OPERATING MODES you can switch between three different operating modes: Manual, Automatic and Comfort.

Manual mode
Your stove operates at a heating power preset by you.

The recommended output range is between 50% and 100%. If you wish to select a lower heating output, keep pressing the minus button for 2 seconds. Now you can set the heating output within the range from 30% to 50%.

Tip
Running the stove at the recommended range from 50% to 100% of the heating capacity will cause less sooting of the firebox and the door glass.

Automatic mode
Your stove operates at the heating power preset by you during the heating times, as saved. Outside the heating times your stove is in the STANDBY operating state.

Tip
If you select the automatic mode although no heating times are saved, the symbol “heating times” will be flashing.

Please note
The stove may only be started in the STANDBY operating state. In the operating state STOVE OFF it is not possible to start up the stove.

Comfort mode
During the heating times, as saved, your stove keeps a nominal room temperature preset by you.

Outside the heating times, it is possible to adjust a setback temperature. If the room temperature drops below the adjusted setback temperature, your stove will start outside the saved heating times as well.

In this operating mode, heating times may be disabled as well. In this case, your appliance will permanently heat the room to the nominal temperature you set.

Please note
The stove may only be started in the STANDBY operating state. In the operating state STOVE OFF it is not possible to start up the stove.

Please note
The comfort mode may only be selected if a RIKA room sensor is connected.

Heating up without electrical ignition
If the ignition cartridge of the appliance should fail, firelighters can be used to ensure an emergency operation. First, start the stove as usual. Wait for the cleaning cycle and for the grid to tip. Then open the firebox door and place a handful of pellets, along with the firelighter, into the cleaned fire trough and light it up, subsequently closing the firebox door.

Please note
Attention: Do not use any flammable liquids to light up the fire!
5. SETTINGS

The main menu SETTINGS is provided to set, among others, the heating times, Multi Air blower, frost protection etc.

Heating times

Using the heating times program you can operate your stove according to the heating schedule. Activating heating times (ON) gives access to setback temperature (only with Rika room sensor), and the heating times program.

In the heating times program, single weekdays, or a couple of weekdays can be marked simultaneously (highlighted in ORANGE).

Upon selecting heating time I or heating time II you can enter the ON and OFF times you require for the marked weekdays.

Weekdays that have already been programmed are highlighted in GREEN when re-accessing the heating times program.

Tip
As soon as a weekday is marked, the saved heating times are displayed.

If a number of weekdays are marked, only the identical heating times are displayed. If the heating times differ from each other, hash keys (##:##) are displayed.

Tip
If your stove does not start up although heating times have been saved, please check if they are enabled (ON) and if your stove is in STANDBY operating state.

Multi Air fan

Enabling the Multi Air fan (ON) you get access to fan speed and fan adaptation.

Fan speed

The volume of convection air is adjustable from AUTO (adapts automatically according to heating power), over to Level 1 (min) and level 5 (max).

Fan adaptation

In addition, it is possible to adapt the Multi Air fan speed (AUTO, level 1 to level 5) within +/-30% of fan speed.

Frost protection

If this function is enabled (ON) and if the room temperature drops below the set value (2°C - 10°C), your stove will start working.

This applies also outside the heating times and in operating state STOVE OFF.

RIKA room sensor

For more information on this option, please consult the operating instructions room sensor / Rika radio room sensor.

RIKA firenet

For more information on this option, please consult the operating instructions Rika firenet.

GSM

For more information on this option, please consult the operating instructions Rika GSM Control.

Screen Saver

Sets the time interval (OFF, from 1 min to 30 min) for activating the screen saver.

Child lock

If this function is enabled (ON), a 4-digit code can be saved. Now, the screen saver may only be disabled by entering the saved code.

Date/time

Sets date and time.

Language selection

Selects the desired language.

Resets

Servicing

Reset the supply rate to 700 kg after a service has been carried out.

Factory setting

Resets all stove settings to the factory setting.

Please note
This reset may only be performed if the stove temperature is below 80°C!

Recording

Only for service technicians.

Service

Only for service technicians.

7. EXTENDED OPERATING MODES - PELLETS / LOGS

Your combi stove features an automatic fuel recognition and a combustion regulation. Operation may any time switch between pellets and logs.

Please note
It is imperative to use the feed rates as indicated in the instructions manual of your stove, without any exception.

Please note
During the whole period of log operation the functions of heating time, room temperature and frost protection, as well as the external request are disabled. These functions will not be re-activated before log operation has finished.

Correct heating up

Please note
Do not use any flammable liquids to light up the fire!

Open the firebox door and place 2 small pieces of chipboard in longitudinal direction to either side of the firebox floor.

Place 2 or 3 logs crossways onto the chipboard.

Now place more chipboard pieces crossways and add 2-4 ribs of the RIKA firelighter on top of the chipboard. If necessary, some uncoated paper can be placed under the chipboard instead of the firelighter.

Now set the RIKA firelighter (or the uncoated paper) alight and close the firebox door.

Please note
Be sure that the combustion trough is empty as the grid will tip after the firebox door has been closed.

Tip
The RIKA firelighter no. E15718 is available from your RIKA dealer.

Automatic log operation

The automatic burn-off regulation shows the following sequence:

LOG CHECK
Your stove checks if logs have been placed.

LOG OPERATION / ECO OPERATION
Your stove ensures optimum log burn-off.

PLEASE RELOAD
Your stove indicates the time you should add more logs.

DO NOT RELOAD
Your stove reports that no ignition can be ensured after logs have been added.

Eco Operation

For a small amount of fuel (partial load) you should use the ECO OPERATION mode. Under ‘Extended functions’, after closing the firebox door you can switch to ECO OPERATION - the operating state LOG CHECK will change to ECO OPERATION.

Please note
The ECO OPERATION mode is only possible after the first burn-off!
Current-free log operation

Please note
Your stove must be disconnected from the mains for current-free operation.

Please note
Any modification of the procedure stated above may result in damaging of components, which automatically will void any warranty claims.

Insert the socket spanner supplied in the sleeve, as shown.

Start stove operation. After ignition has been successful, the operating state IGNITION switches to LOG CHECK, and after successful log recognition to LOG OPERATION.

Please note
If no more logs are reloaded, pellet operation starts automatically as the unit is still on.

Automatic log detection during operation
Open the firebox door and place 2 logs into the box. Be sure that at least one of the logs lies above the ignition trough to facilitate burning.

Close firebox door. The operating state switches from CONTROLLED OPERATION to LOG CHECK, and after successful log recognition to LOG OPERATION.

Please note
If no more logs are reloaded, pellet operation restarts automatically as the unit is still on.

If you switch the combi stove off during log operation, the operating state will change to STOVE OFF after the logs have burned down.

Combined operation

Automatic ignition of firewood during start-up, or automatic log recognition during operation.

Automatic ignition of firewood during start-up:
Place two logs into the firebox. Be sure that at least one of the logs lies above the combustion trough to facilitate burning. Close firebox door.

Start stove operation. After ignition has been successful, the operating state IGNITION switches to LOG CHECK, and after successful log recognition to LOG OPERATION.

Please note
If no more logs are reloaded, pellet operation starts automatically as the unit is still on.

Automatic log detection during operation
Open the firebox door and place 2 logs into the box. Be sure that at least one of the logs lies above the ignition trough to facilitate burning.

Close firebox door. The operating state switches from CONTROLLED OPERATION to LOG CHECK, and after successful log recognition to LOG OPERATION.

Please note
If no more logs are reloaded, pellet operation restarts automatically as the unit is still on.

If you switch the combi stove off during log operation, the operating state will change to STOVE OFF after the logs have burned down.

Please note
Always ensure that the stove has enough air for combustion.
## Notes

<table>
<thead>
<tr>
<th>Meaning</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A unit maintenance or a cleaning cycle is required.</td>
<td>Perform a maintenance or a cleaning cycle.</td>
</tr>
<tr>
<td>The mainboard battery is empty or defective.</td>
<td>Heating operation can continue but after each power failure you must reenter date, time and heating times.</td>
</tr>
<tr>
<td>After each power failure the air flaps are calibrated anew.</td>
<td>Wait until procedure is finished (up to 5 min).</td>
</tr>
</tbody>
</table>

### Meaning
- **BATTERY EMPTY OR DEFECTIVE**: The mainboard battery is empty or defective.

### Solution
- **PLEASE PERFORM SERVICE**: Select the Setup menu/submenu Resets. Reset the feed rate service to 700 kg.
- **NOTE BATTERY EMPTY OR DEFECTIVE**: After each power failure the air flaps are calibrated anew.
- **AIR FLAPS ON CALIBRATION**: Wait until procedure is finished (up to 5 min).

## Warnings

<table>
<thead>
<tr>
<th>Warning</th>
<th>Meaning</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>PELOTT HOPPER LID OPEN</td>
<td>The pellet hopper lid is open.</td>
<td>Close pellet hopper lid.</td>
