1. INTRODUCTION

Our congratulations for having purchased a quality product.
To ensure a trouble-free functioning of your appliance we recommend you to thoroughly read through the present instructions and to strictly observe the suggestions contained herein at all times.
By cleaning and servicing your appliance regularly and expertly you will ensure a long-lasting functioning over many years.
Rika is always ambitious to provide an excellent service. Have a good time, enjoying the cozy warmth of your Rika stove as often as you wish.

RIKA Innovative Ofentechnik GmbH

2. COMMISSIONING

General view of interfaces

External request incl. cable bridge
USB connection
Serial interface

External request
- External room thermostat*
- Contactor (e.g. exhaust hood)*
* remove cable bridge and connect a 2-pin cable with a section between 0.5 and 0.75mm² instead.
It will take approximately 1 minutes for your stove to shut down after receiving an external shut-down request.

Please note
Operation is not possible unless either the cable bridge, or an external request (e.g. an external room thermostat) are connected. The external request has priority over all operating modes (MANUAL/AUTOMATIC/COMFORT).

Serial interface
- Rika room sensor/ Rika radio room sensor (available on request)
- Rika GSM Control (available on request)

USB connection
- Flash drive (included in the delivery)
- Rika firenet (available on request)

First steps

Please note
Manipulations on hardware components may only be performed by a trained expert dealer or our customer service. Inappropriate handling of these parts will void contractual and legal warranty claims!

Please note
The appliance may only be put into operation if fully assembled!

Before your appliance is energised for the first time, the flash drive (included in the delivery) must be inserted into the interface provided for that purpose at the rear side of the stove.
Install the software as described in the attached instructions.
After the unit is connected to the mains, the display changes to Language Selection.

Select a language. Subsequently, adjust Date and Time.

Tip
To prevent incorrect input, only the permissible digits are released for each input step.

The “C” button deletes the input within a selected display box.
In case of erroneous entry, depress the appropriate box to make a new entry.
If all data have been entered correctly, an Enter button appears. By pressing this button, the input is confirmed and the data are saved.

Tip
Both language selection and setting of date and time must only be carried out on initial operation.
3. MENU NAVIGATION

Your stove is equipped with a state-of-the-art control system. You can control all functions on the intuitive touch display. The surface of the touch display responds to both finger pressure and touch pen.

Please note
Do not use sharp-pointed objects to operate the appliance so as to prevent damaging the surface of the touch display.

Navigation

The complete controls of your appliance include 4 main menu levels:

- **HOME**
  Controls: Unit start (stop), regulation of heating power / set ambient temperature, display of current stove state, active info

- **OPERATING MODES**
  Range: Manual mode, automatic mode and comfort mode

- **SETTINGS**
  Setting: Heating times, Multi-air, frost protection, RIKA room sensor, ...

- **INFO**
  Display: Flame temperature, total operating hours, total ignitions, software version, ...

---

**Standard functions**

Each stove model provides the following standard functions:

**Reducing heating output**

**Increasing heating output**

**Off**

**Start / Standby**

Please note
To avoid involuntary starting or switching off, either button must be depressed for 2 seconds.

Please note
If your stove is shut off during the operating states **IGNITION** or **INITIAL PHASE**, the display will switch to **BURN-OFF** only after a few minutes.

---

**Cleaning function**

In addition to the standard functions, stove models with an automatic grid dispose of a cleaning function.

**Grid turning into cleaning position**

**Show additional functions**

Please note
Turning of the grid is only possible during the operating state **STOVE OFF** at a firebox temperature below 80°C!
Door opener
In addition to the standard functions, some stove models dispose of a door opening function.

ECO function
In addition to the standard functions, some combi stoves dispose of an ECO function.

Active info
The ‘Active info’ displays whether or not a module is connected or enabled.

HEATING TIMES
Standard function

ROOM SENSOR
Only with RIKA room sensor / RIKA radio room sensor

GSM
Only with RIKA GSM Control

FROST PROTECTION
Only with RIKA room sensor / RIKA radio room sensor

RIKA firenet
Only with RIKA firenet

Please note
More detailed information on the different options can be found in the respective instructions.
4. OPERATING MODES

In the main menu OPERATING MODES you can switch between three different operating modes: Manual, Automatic and Comfort.

**Manual mode**
Your stove operates at a heating power preset by you.

The recommended output range is between 50 % and 100 %. If you wish to select a lower heating output, keep pressing the minus button for 2 seconds. Now you can set the heating output within the range from 30 % to 50 %.

**Tip**
Running the stove at the recommended range from 50% to 100% of the heating capacity will cause less sooting of the firebox and the door glass.

**Automatic mode**
Your stove operates at the heating power preset by you during the heating times, as saved. Outside the heating times your stove is in the STANDBY operating state.

**Tip**
If you select the automatic mode although no heating times are saved, the symbol “heating times” will be flashing.

**Please note**
The stove may only be started in the STANDBY operating state. In the operating state STOVE OFF, it is not possible to start up the stove.

**Comfort mode**
During the heating times, as saved, your stove keeps a nominal room temperature preset by you.

Outside the heating times, it is possible to adjust a setback temperature. If the room temperature drops below the adjusted setback temperature, your stove will start outside the saved heating times as well.

In this operating mode, heating times may be disabled as well. In this case, your appliance will permanently heat the room to the nominal temperature you set.

**Please note**
The stove may only be started in the STANDBY operating state. In the operating state STOVE OFF, it is not possible to start up the stove.

**Please note**
The comfort mode may only be selected if a RIKA room sensor is connected.

---

**Heating up without electrical ignition**

If the ignition cartridge of the appliance should fail, firelighters can be used to ensure an emergency operation. First, start the stove as usual. Wait for the cleaning cycle and for the grid to tip. Then open the firebox door and place a handful of pellets, along with the firelighter, into the cleaned fire trough and light it up, subsequently closing the firebox door.

**Attention**
Do not use any flammable liquids to light up the fire!
The main menu SETTINGS is provided to set, among others, the heating times, Multi Air blower, frost protection etc.

**Heating times**

Using the heating times program you can operate your stove according to the heating schedule. Activating heating times (ON) gives access to setback temperature (only with RIKA room sensor), and the heating times program.

In the heating times program, single weekdays, or a couple of weekdays can be marked simultaneously (highlighted in ORANGE). Upon selecting heating time I or heating time II you can enter the ON and OFF times you require for the marked weekdays.

Weekdays that have already been programmed are highlighted in GREEN when re-accessing the heating times program.

**Frost protection**

If this function is enabled (ON) and if the room temperature drops below the set value (2°C - 10°C), your stove will start working.

This applies also outside the heating times and in operating state STOVE OFF.

**RIKA room sensor**

For more information on this option, please consult the operating instructions room sensor / RIKA radio room sensor.

**RIKA firenet**

For more information on this option, please consult the operating instructions RIKA firenet.

**GSM**

For more information on this option, please consult the operating instructions RIKA GSM Control.

**Screen Saver**

Sets the time interval (OFF, from 1 min to 30 min) for activating the screen saver.

**Child lock**

If this function is enabled (ON), a 4-digit code can be saved. Now, the screen saver may only be disabled by entering the saved code.

**Date/time**

Sets date and time.

**Language selection**

Selects the desired language.

**Resets**

**Kg till cleaning**

Resets the supply rate to 1500kg after a service has been carried out.

**Factory setting**

Resets all stove settings to the factory setting.

Please note

This reset may only be performed if the stove temperature is below 80°C!

**Logging**

Only for service technicians.

**Service**

Only for service technicians.
In the main menu INFO you can retrieve the most important parameters.

</table>
Your combi stove features an automatic fuel recognition and a combustion regulation. Operation may any time switch between pellets and logs.

Please note
It is imperative to use the feed rates as indicated in the instructions manual of your stove, without any exception.

Please note
During the whole period of log operation the functions of heating time, room temperature and frost protection, as well as the external request are disabled. These functions will not be re-activated before log operation has finished.

Correct heating up

Open the firebox door and place 2 small pieces of chipboard in longitudinal direction to either side of the firebox floor.

Place 2 or 3 logs crossways onto the chipboard.

Now place more chipboard pieces crossways and add 2-4 ribs of the RIKA firelighter on top of the chipboard. If necessary, some uncoated paper can be placed under the chipboard instead of the firelighter.

Now set the RIKA firelighter (or the uncoated paper) alight and close the firebox door.

Please note
Be sure that the combustion trough is empty as the grid will tip after the firebox door has been closed.

Automatic log operation

The automatic burn-off regulation shows the following sequence:

LOG CHECK
Your stove checks if logs have been placed.

LOG OPERATION / ECO OPERATION
Your stove ensures optimum log burn-off.

PLEASE RELOAD
Your stove indicates the time you should add more logs.

DO NOT RELOAD
Your stove reports that no ignition can be ensured after logs have been added.

Eco Operation

For a small amount of fuel (partial load) you should use the ECO OPERATION mode. Under ‘Extended functions’, after closing the firebox door you can switch to ECO OPERATION - the operating state LOG CHECK will change to ECO OPERATION.

Tip
The RIKA firelighter no. E15718 is available from your RIKA dealer.

Please note
The ECO OPERATION mode is only possible after the first burn-off!
**Current-free log operation**

**Please note**
Your stove must be disconnected from the mains for current-free operation.

**Please note**
Any modification of the procedure stated above may result in damaging of components, which automatically will void any warranty claims.

Insert the socket spanner supplied in the sleeve, as shown.

Turn it clockwise until a slight stop can be felt.

Remove the socket spanner from the opening and insert it again in horizontal position.

Turn the spanner ant-clockwise until it is flush with the marking in the side panel (approx. 45°). It is now in heating up position.

After heating-up has been successful, turn the spanner anti-clockwise step by step to reduce the combustion air manually, thus regulating the burn-off.

Each time logs are added, the spanner must be brought into heating up position again. The combustion air is regulated as described above.

**Please note**
Always ensure that the stove has enough air for combustion.

**Combined operation**

**Automatic ignition of firewood during start-up**
Place two logs into the firebox. Be sure that at least one of the logs lies above the combustion trough to facilitate burning. Close firebox door.

Start stove operation. After ignition has been successful, the operating state **IGNITION** switches to **LOG CHECK**, and after successful log recognition to **LOG OPERATION**.

**Please note**
If no more logs are reloaded, pellet operation starts automatically again as the unit is still on.

**Automatic log detection during operation**
Open the firebox door and place 2 logs into the box. Be sure that at least one of the logs lies above the ignition trough to facilitate burning.

Close firebox door. The operating state switches from **CONTROLLED OPERATION** to **LOG CHECK**, and after successful log recognition to **LOG OPERATION**.

**Please note**
If no more logs are reloaded, pellet operation restarts automatically as the unit is still on.

If you switch the combi stove off during log operation, the operating state will change to **STOVE OFF** after the logs have burned down.

**Easy-refilling operation**

In order to reduce the discharge of fluegas when refilling logs there is a easy-refilling operation available.

Open the fluegas flap

Wait about 3 seconds before you open the combustion chamber door to refuel.

After closing the combustion chamber door, turn the wrench clockwise to close the fluegas flap.

**Tip**
If the flue gas flap is open, a warning appears on the display. It expires when you close the flue gas flap.

**Note**
Pellet operation is not possible with an opened flue gas flap.
## Notes

**Please note**

<table>
<thead>
<tr>
<th>Meaning</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>A unit maintenance or a cleaning cycle is required.</td>
<td>Perform a maintenance or a cleaning cycle. Select the <strong>Setup menu / submenu</strong> <strong>Resets</strong>. Reset the “kg till cleaning” to 1500 kg.</td>
</tr>
<tr>
<td>The mainboard battery is empty or defective.</td>
<td>Heating operation can continue but after each power failure you must reenter date, time and heating times.</td>
</tr>
<tr>
<td>After each power failure the air flaps are calibrated anew.</td>
<td>Wait until procedure is finished (up to 5 min).</td>
</tr>
</tbody>
</table>

**Meaning**

- A unit maintenance or a cleaning cycle is required.
- The mainboard battery is empty or defective.
- After each power failure the air flaps are calibrated anew.

**Solution**

- Perform a maintenance or a cleaning cycle. Select the **Setup menu / submenu** **Resets**. Reset the “kg till cleaning” to 1500 kg.
- Heating operation can continue but after each power failure you must reenter date, time and heating times.
- Wait until procedure is finished (up to 5 min).

## Warnings

**Warning**
